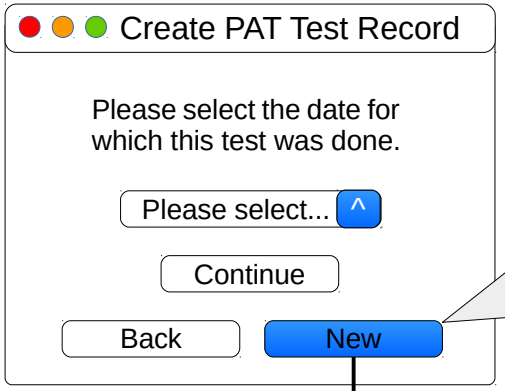
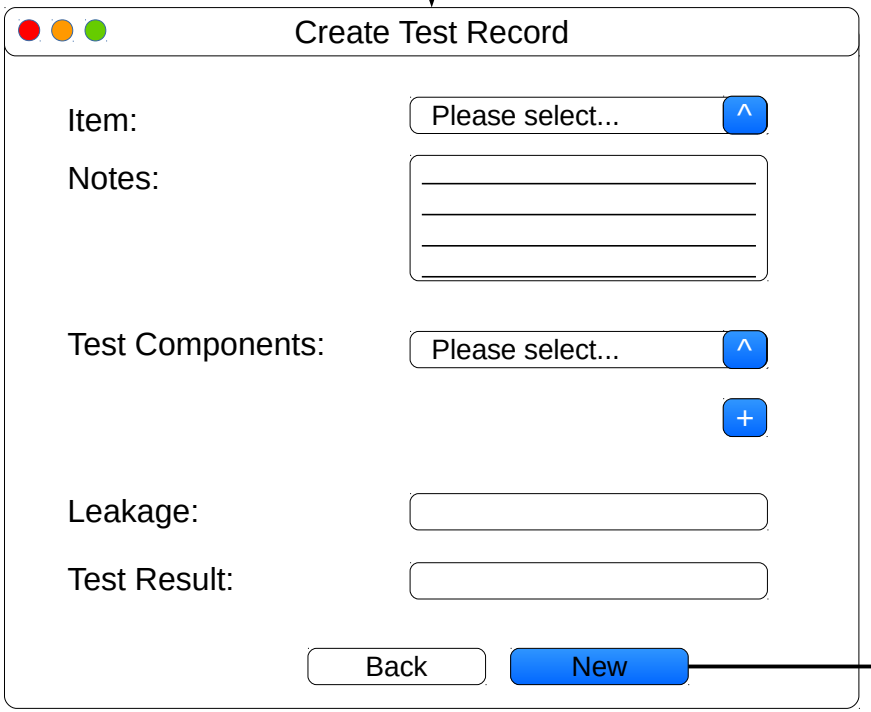
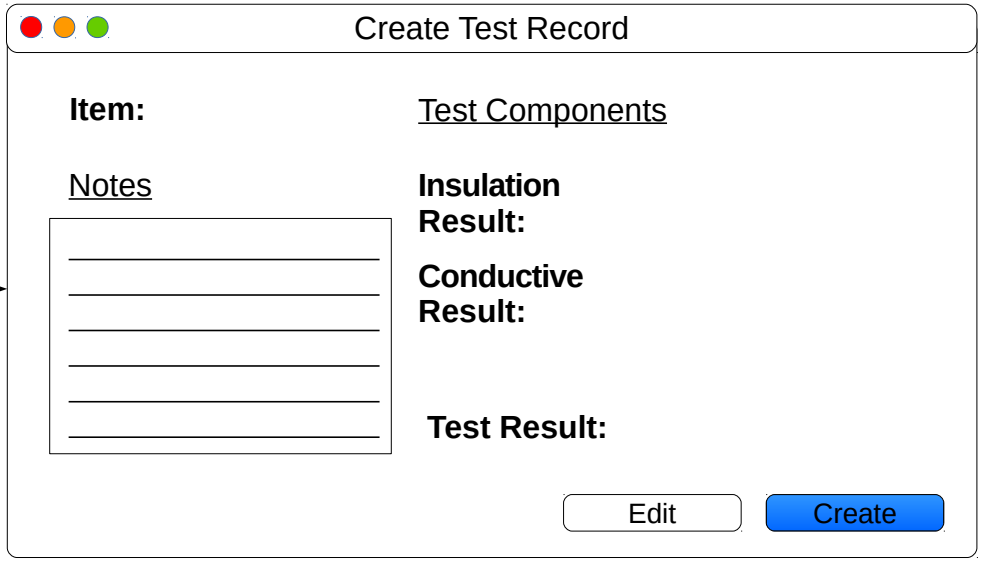
Select a date from a list of test dates or create a new date.



Clicking on “New” will take the user to a calendar pop up box where they are required to select a date



Here, the user is presented with a box that will display a preview of the record along with the data before it is committed to the table in the database. The “Create” button will commit this data to the table in the database. The “Edit” button will take the use back to the data entry window to amend any mistakes they may have made.



Various inputs here. For the item there is a drop down menu for components and for the item records that are currently in the Items table. There are only two component types for a PAT test, not all of them are needed in a PAT test. Leakage is an integer input and the test result is a boolean data type generated by reference to the items class and comparing it to the appropriate component result limits
