I have developed a preview that will enable the user to print out an invoice for a loan. When the user clicks the print button that will be placed on a dialog when they select a specific customer loan. They will then be presented with this dialog with printing options and the ability to export or send via a PDF generated image (Please see next example)

Print

Printer: Photosmart 7510 series

Presets: Default Settings

Copies: 1 ☐ B & W ☐ Two-Sided

Pages: All
